Frontend

Wie gehen wir vor?

1. Node.js

Node.js

Download node.js [https://nodejs.org/en/download/]

- 1. Node.js
- 2. Vue CLI

Projekterstellung mit Vue CLI

- npm install -g vue-cli
 - vue ui
- + Express generator
 - + npm install express-generator -g
 - + express testapp

Express

- 1. Vue CLI
- 2. Node.js
- 3. PostgreSQL

PostgreSQL

- 1. Vue CLI
- 2. Node.js
- 3. PostgreSQL
- 4. Dependencies

Dependencies (1)

- Entweder über vue ui
- Oder terminal über npm install [dependency]

- Wir verwenden (auswahl)
 - Express → Framework für WebAPI
 - Knex → Query builder für SQL
 - Passport (-jwt)→ Authentication
 - Jsonwebtoken → Authentication
 - Axios \rightarrow http client mit promises

- 1. Vue CLI
- 2. Node.js
- 3. PostgreSQL
- 4. Dependencies

Dependencies (2)

npm install axios bluebird body-parser
bootstrap-vue connect-history-api-fallback
dotenv express http-errors jquery
jsonwebtoken knex morgan passport passportjwt pg secure-password vue-axios

- 1. Vue CLI
- 2. Node.js
- 3. PostgreSQL
- 4. Dependencies

Passport

- Authentifizierung für Express-basierte Web-Applikationen
- Kernmodul stellt Infrastruktur zur Verfügung
- Implementierung über Strategies
 - 500+ Authentifizierungs-Methoden
 - username + password, Facebook, Twitter, JWT, OAuth
 - besitzen eigenes npm package
- \$ npm install passport
- \$ npm install passport-<strategy>
- Passwortspeicherung, Hashing werden nicht von Passport übernommen

- 1. Vue CLI
- 2. Node.js
- 3. PostgreSQL
- 4. Dependencies

JSON Web Token

- Access-Token welches verifizierbare Claims zwischen
 Client und Server ermöglicht (RFC 7519)
- Besteht aus Payload, Header und Signature
- Codierte JWT lassen sich <u>auslesen</u>
- Header + Payload sind Base64 kodiert und mit "."
 verbunden (= Message)
- Signatur als HMAC über Message und geheimen Schlüssel

eyJhbGci0iJIUzI1NiIsInR5cCI6IkpXVCJ9. eyJzdWIi0iIxMjM0NTY30DkwIiwibmFtZSI6IkpvaG4gRG9lIiwiaWF0IjoxNTE2MjM5MDIyfQ. SflKxwRJSMeKKF2QT4fwpMeJf36P0k6yJV_adQssw5c

- 1. Vue CLI
- 2. Node.js
- 3. PostgreSQL
- 4. Dependencies
- 5. API

API

API erstellen mittels express

```
/* easy get example */
     router.get("/", function(req, res) {
       res.send("Hello World");
11
     });
12
13
     /* post example */
     router.post("/", function(req, res) {
15
       if (typeof req.body.username !== "undefined") {
         res.send("Hello " + req.body.username);
17
       } else {
18
         res.status(400).send("There is no username!");
19
     });
21
```

- 1. Vue CLI
- 2. Node.js
- 3. PostgreSQL
- 4. Dependencies
- 5. API

API

- Knex init
- knex migrate:make migration_name
- knex migrate:latest --env production
- knex migrate:rollback

- 1. Vue CLI
- 2. Node.js
- 3. PostgreSQL
- 4. Dependencies
- 5. API

API

```
"name": "pbovue",
"version": "0.1.0",
"private": true,
"scripts": {
  "start": "node ./bin/www",
  "serve": "vue-cli-service serve",
  "build": "vue-cli-service build",
  "lint": "vue-cli-service lint"
},
```

- 1. Vue CLI
- 2. Node.js
- 3. PostgreSQL
- 4. Dependencies
- 5. API

API

- Testen mittels Restlet oder Postman

- 1. Vue CLI
- 2. Node.js
- 3. PostgreSQL
- 4. Dependencies
- 5. API
- 6. Frontend

Frontend

- 1. Vue CLI
- 2. Node.js
- 3. PostgreSQL
- 4. Dependencies
- 5. API
- 6. Frontend

Frontend

```
<b-container id="loginForm">
      <b-form @submit="onSubmit">
        <b-form-input
          id="inputUsername"
          v-model="username"
          type="text"
          placeholder="Username"
          :state="usernameState"
        <b-form-input
          id="inputPassword"
         v-model="password"
          type="password"
          placeholder="Password"
          :state="passwordState"
         id="submitButton"
          type="submit"
        >Login</b-button>
 </b-container>
</template>
```
